## MORE HYGIENE

Overflowing and unpleasant trash cans are nasty, but they are a common problem in women's restrooms. Our Femcare™ MVP range of feminine hygiene waste disposal units means that sanitary waste is disposed of safely and responsibly.

Keep your customers safe and happy with an EPA approved antimicrobial additive, Biomaster®, on the surface of each unit.

A clean surface means that its more likely customers will use the unit, saving money on plumbing blockages.

On opening the Femcare™ MVP unit, an innovative rotating carousel makes sure waste is completely hidden from view. At the same time, odors are eliminated.

The chute and the top cover are removed both quickly and easily for cleaning.

## MORE STYLE

Stylish and elegant, the Femcare™ MVP range is striking yet subtle, complementing any space or décor.

Choose from either a manual unit with an easy-to-use foot pedal, or an automatic version.

Beautifully simple to operate, the Femcare™ MVP range has exceptional functionality, quality and unique service-friendly features.

Robust and reliable, each unit holds a generous 23 liters, yet its compact design provides minimal obstruction when on the floor.

Take advantage of an optional wall mounting bracket.

We value our environment and know you do too, so each Femcare™ MVP unit is made of fully recyclable material.

*Biomaster® antimicrobial silver ions protection and odor eliminating technology provides round the clock protection against microbial build up, giving safe, effective and permanent anti-microbial protection to the surface of the Femcare™ MVP carousel and re-usable tray against degradation.*

## LINER TECHNOLOGY

The first feminine hygiene waste liner incorporating Biomaster® antimicrobial silver ions protection and odor eliminating technology.

Biomaster® (silver ions) protection reduces non-pathogenic microorganism growth on the surface of the liner preventing product degradation.

Biomaster® is an EPA and FDA approved antimicrobial additive.

Unpleasant smells are eradicated with the odor eliminating technology which has the ability to deodorize smells that may exist within the liner during its use.

This new liner technology not only ensures the smell of the contents do not emanate out of the sack when in use but also provides a pleasant fragrance by use of an additional scent additive.
