

May 2014

**Important update – new universal chip programming for Vectair Systems’
Airoma®, Micro Airoma® and Quadrasan® dispensers
(SFX & MVP Ranges included)**

As a technological leader in the hygiene world, here at Vectair Systems we are always looking to new technology to create the most innovative products on the market.

We are therefore pleased to announce the introduction of a **new universal chip** - an exciting improvement to the programming and visual display of our Airoma®, Micro Airoma® and Quadrasan® dispensers in all platforms (SFX & MVP range included).

This new universal chip has enabled us to standardize our programmes across our product ranges, taking the best features from each dispenser, utilizing our patented features, and combining them to create a program that caters for everyone.

From May 2014, we will roll out these new programmes starting with the Airoma® range. Micro Airoma® and Quadrasan® formats will follow in due course. Each dispenser will feature a universal chip that incorporates many of the key patented features of the original dispenser, as well as a number of brand new features.

Original features include real time programming, countdown clock and auto reset.

Standard features now include:

1. Choose exact START and STOP times.

This means you can programme for any start time and any end time.

Example: Start @ 08.00 / End @ 21.00 = exactly 13 hours of operation rather than having to choose between 12 or 16 hours.

2. Display number of days remaining.

This is an **optional** display which provides real-time usage verification.

3. Patented I.P.E.™ facility.

A patented I.P.E.™ facility enables programmable fragrance intensity, by allowing users to programme one period of enhanced fragrance delivery per day to suit location requirements.

Innovators in hygiene.

4. **Selection of "DAYS OFF" feature.**

Now a standard feature across all ranges.

5. **Programming scrolling**

For ease of correction, now all dispensers include a "scroll back" as well as auto programme verification feature.

6. **Improved "Battery Life" indicator**

Improved chip technology delivers more accurate and real-time battery usage verification.

PLEASE NOTE: It is important that anyone who is fitting either Airoma®, Micro Airoma® or Quadrasan® is informed of these changes, to ensure each unit is programmed to the supplier's exact specification. Attached is the updated instruction leaflet, which will be delivered with every Airoma®, Micro Airoma® and Quadrasan® dispenser.

This new and improved technology will ensure that the Vectair range continues to deliver cutting edge performance, improved reliability and functionality.

With best wishes,

The Team at Vectair Systems
