## What is Microfiber?

Microfiber is a polyester, polyamide blend. The material is split during the manufacturing process to produce multi-stranded fibers. These fibers are 100 times finer than human hair. The fibers are then woven together, creating a surface area covered with millions of spaces to trap moisture, dirt and debris. Static charge also aids in microfiber cleaning, as the positively charged split fiber traps negatively charged dirt particles until the pad is washed.

## Benefits of Microfiber

Testing has shown microfiber products to clean more thoroughly while using significantly less chemicals and water. This is good for the environment as well as being cost-effective. Microfiber is lightweight and easy to maneuver, saving time and labor. The ergonomic design of microfiber frames and handles eliminate back strain. The reduction of water usage minimizes the risk of slip and fall accidents. The ease of changing pads and the variety of colors eliminates cross-contamination.

## Why O-Cedar Commercial Microfiber?

O-Cedar Commercial Products uses ONLY the Highest Quality microfiber. MaxiPlus® microfiber looped-end mops, flat mops and cloths are quality cleaning tools manufactured with a blend of 80% polyester and 20% polyamide (nylon) fibers. For an example of the benefit of our products, see our comparison between our MaxiPlus® Microfiber Loop-End Mops and Conventional Mops.

## Microfiber Cleaning Instructions

MaxiPlus® microfiber flat mops and microfiber cloths can be laundered up to 500 times, and MaxiPlus® microfiber loop-end and cut-ends mops can be laundered up to 400 times. These mops can withstand up to 200 degree water for bleach-free laundering. Less detergent can be used in the washing cycle, due to the nature and make-up of the fibers used in these products. NEVER use any fabric softener. A short time in the drying cycle at low temperatures will insure a longer life of the products.
