Scrubble® - ETC - Treleoni® - International

The ACS Maroon FPP is a chemical free stripping pad. It is an alternative to using a black pad and stripper to take all the finish off the floor prior to re-coating the floor with new finish. Used with or without water, the ACS Maroon FPP will provide you with a "GREEN" solution to stripping the floor. Green, because you will not be introducing stripping chemicals to the environment.

The ACS Maroon FPP can be used under an auto scrubber, a conventional rotary machine, or under an orbital machine. Simply use your normal stripping machine and replace your conventional stripping pad with the ACS Maroon FPP.

The ACS Maroon FPP is 3/8" thick and the round pad should be used with a thick Red or White pad to drive it so it will have more flexibility to reach those unlevel areas of floor surface.

If you are wet stripping, simply wet the area to be stripped with clear water so the pad is lubricated and the dust is kept under control. Keep it wet during the entire process. After making several passes with the ACS Maroon FPP, pick up the solution with a wet/dry vacuum or by using a mop with a bucket and wringer. After the solution has been picked up, rinse the entire area with a clean mop and clear water. Repeat these steps over other areas that are to be stripped until the entire floor is ready for fresh finish.
