Floor Conditioning and Scrub & Recoat Pad

The Redwood Conditioning floor pad is designed to recondition the surface of a wood floor (gymnasium) or VCT. With its fine abrasive action, it will smooth the surface of raised wood fibers that are created when using waterbased sealers and finishes. It will scrub and clean a wood or VCT floor surface between coats to give you better adhesion and a resulting level surface needed for that next coat.

The Redwood is 3/8" thick and the round pad should be used with a thick Red or White pad to drive it so it will have more flexibility to reach those unlevel areas of floor surface.

Available in both round and rectangular pads.
