Product Verification

“Premium Quality Filtration for Commercial Cleaning”

Most end users believe OEM products are the best quality. This is simply not true.

In other cases, customers are only concerned about price. Low price = low filtration = higher operational costs.

Price is an alarming concern considering “filter bags” are designed to filter the air and capture microscopic allergens and dust particles. Indoor air quality (IAQ) is important to employers, employees, students, patients and customers. Poor filtration directly affects health issues on many levels and increases motor repair costs.

The below information illustrates significant differences in vacuum “filter bag” quality.

Fact: Janitized® products exceed OEM filter specifications.

Verified to provide the highest level of air filtration and filter media surface area to prolong filter life.

Fact: Janitized® products improve Indoor Air Quality (IAQ).

Verified and tested by independent laboratories - Janitized® meets or exceeds 99% down to 0.3 microns. OEM filters tested were as low as 9.5% at 0.3 microns.

Fact: Janitized® products are backed by the industry’s first Blue Ribbon Product Warranty.

Janitized® products provide:

1. Up to 99.9% micro-filtration at 0.3 micron.
2. Up to 40% increased airflow vs OEM bags.
3. Up to 55% increased filter area vs OEM bags.
4. Up to 46% stronger than genuine OEM bags.
5. Blue Ribbon Product Warranty that exceeds OEM warranty.

Look, Touch and Feel the Difference

You can compare these OEM samples to Janitized® and VacFX® you will find a dramatic difference in filter media weight, filter media composition, filter media quality and filtration performance vs OEM bags.

Janitized® products are designed and engineered to be far superior vs the competition and very price competitive.
