

Grounds Maintenance

Where to Sell Herbicides

- Places with large parking lots and/or fence lines
- Municipalities
- Electrical substations
- Highway departments
- Wastewater treatment plants
- School districts
- Park districts
- Railroad right of ways
- Ask your customers!

Herbicide Types

- Selective: Effective against only certain types of plants
- Non-Selective: Kills most plants
 - Contact Herbicide: Kills only the portions of the plant in which it comes in contact. Sometimes called a defoliant. Example: Diquat
 - Systemic Herbicide: Absorbed by the plant and are translocated from the leaves, to the stem, to the root. Example: Glyphosate

Dandelion-Dicot Species:
Taproot does not “branch” out
and form new plants

Quackgrass-Monocot Species:
Roots “branch” out and shoot new
plants

Herbicide Types

- Non-Residual: Does not stick around. Usually deactivates when it hits the soil
 - Examples: Glyphosate, Diquat
- Residual: Remains in the soil for a period of time (days to a year) to prevent plant (re)-growth
 - Examples: Bromacil, Prometon

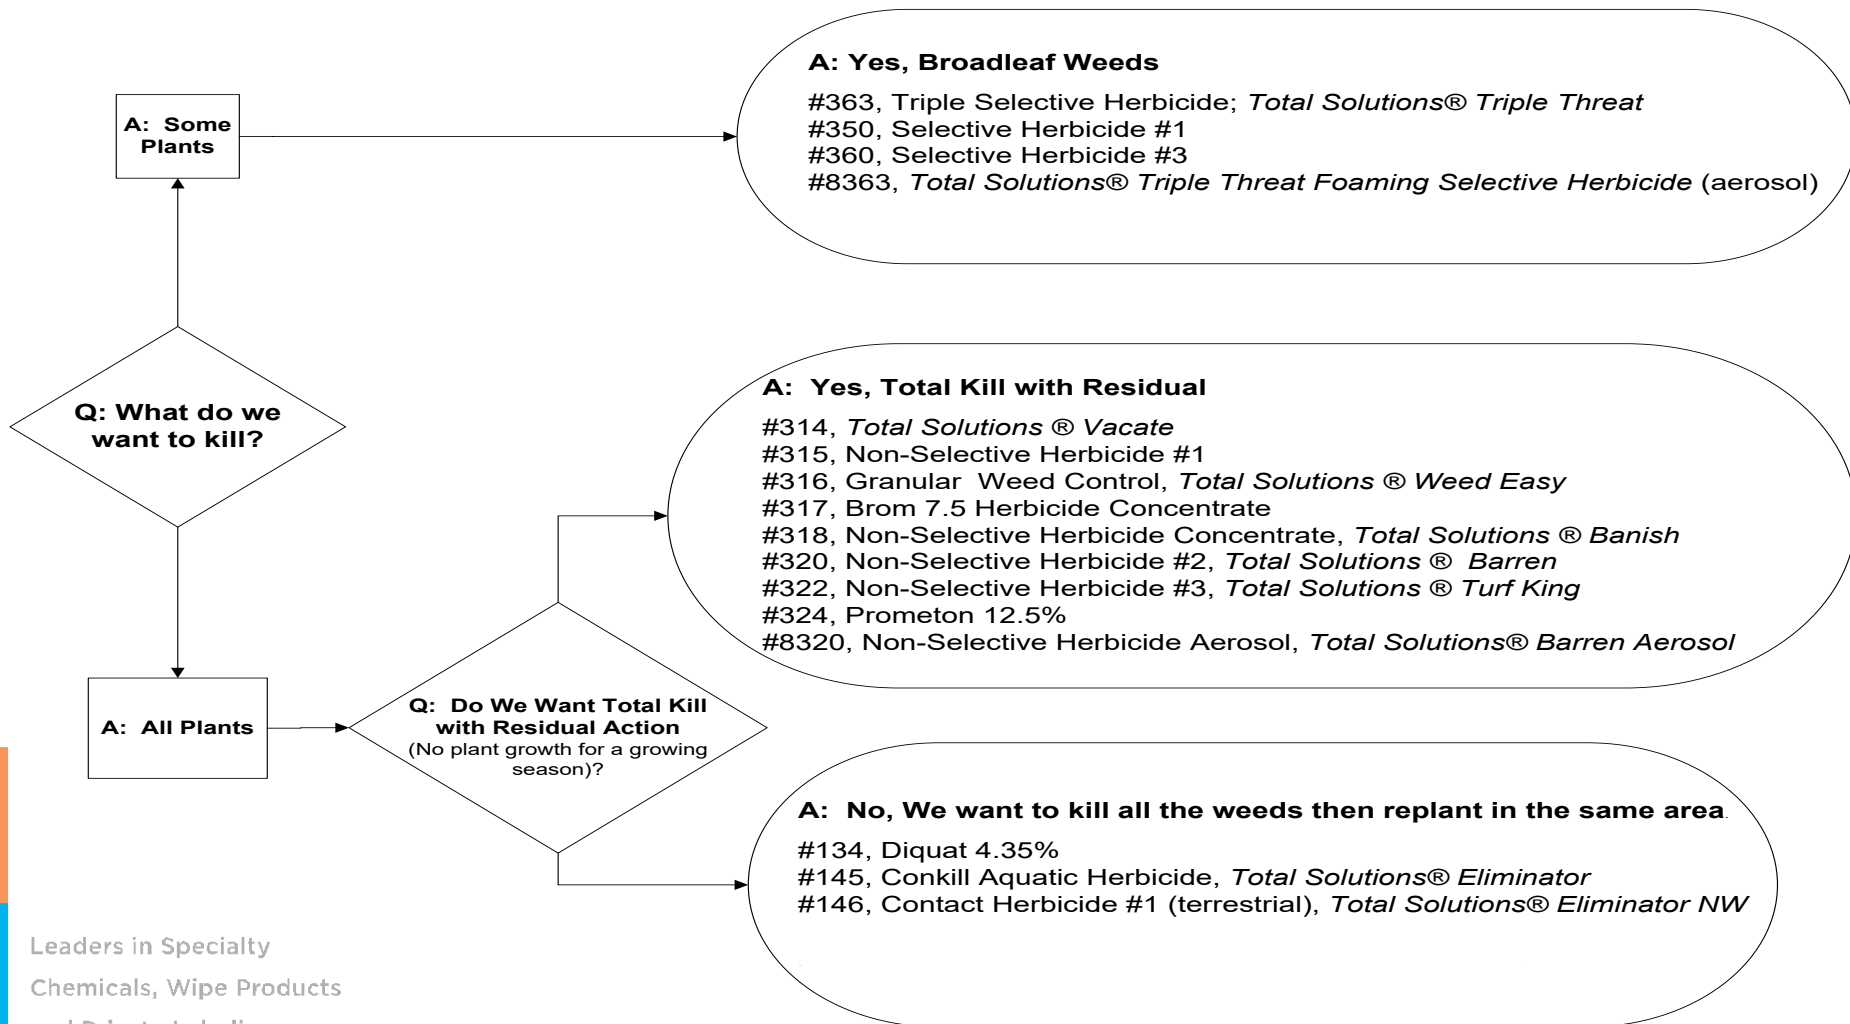

Herbicide Types

- Foliar: Absorbed through the leaves or foliage of the plant
 - Examples: 2,4-D, Glyphosate, Diquat
- Basil: Absorbed through the roots of the plant, and typically work slower
 - Examples: Prometon, Bromacil

VOC Restrictions

- Because of V.O.C. (Volatile Organic Compounds) restrictions, certain herbicides may not be sold into certain states
- V.O.C.'s react with heat and sunlight to form ground level ozone, which is a primary component of smog
- Main V.O.C. states: CA, CT, DE, IL, ME, MD, MA, MI, NH, NJ, NY, OH, PA, VA, DC, and IN

Herbicide Selection Guide

Non-Selective Herbicides

#320: Barren

- Ready-to-use, oil-based soil sterilant
- 1.09% 2,4-D for quick knockdown
- .98% Bromacil sterilizes the soil
- Systemic action, foliar and basal absorbed
- Residual activity prevents re-growth for up to one year
- Non-VOC compliant
- Registered in: Colorado, Iowa, Kansas, Missouri, Nebraska, South Dakota, and Wyoming

#320 Barren In Action

2 Hours

21 Hours

4 Days

Non-Selective Herbicides #8320: Barren Aerosol

- Aerosol version of #320 Barren
- VOC complaint
- Ready-to-Use
- Pinpoint spray to hit target weeds
- Inverted cap for ease-of-use; applies black
- Registered in Illinois

Non-Selective Herbicides

#314: Vacate

- VOC-compliant alternative to #320 Barren
- Ready-to-Use, oil-based soil sterilant
- 1.1% 2,4-D for quick knockdown
- .61% Bromacil sterilizes the soil
- Systemic action, foliar and basal absorbed
- Residual activity prevents re-growth for up to one year
- Registered in Missouri

Selective Herbicides

#363: Triple Threat

- 2,4-D, MCPP, 2,4-DP (~12% active) provide synergistic effect of three herbicides
- Extremely effective against broadleaf weeds
- Foliar and basal absorbed
- Water-dilutable concentrate (~1:50)
- Slight residual activity for 2,4-D (1 – 4 weeks) for hard-to-kill weeds
- Increased effectiveness with #395 Surfactant

#8363: Triple Threat Foaming Aerosol

- Aerosol version of #363 Triple Threat
- Ready-to-Use broadleaf killer
- Pinpoint spray to hit target weeds
- Foams to show application points
- Inverted cap for ease-of-use
- Not registered in Iowa

#8363: Triple Threat Application

Before

Before

Day 2

Day 7

Non-Selective Herbicides

#145: Eliminator

- Water-based herbicide kills almost everything it contacts
- Excellent aquatic weed control
- Contains 1.85% Diquat
- 1:8 concentrate, dilutable with water
- Results seen in a few days
- Foliar absorbed, no residual, does not prevent re-growth
- Increased effectiveness with #395 Surfactant

#145 Eliminator In Action

2 Hours

23 Hours

3 Days

Non-Selective Herbicides

#316: Weed Easy

- Granular soil sterilant. Water activated, requires water or rain to carry to the soil
- 4% Bromacil sterilizes the soil
- Slow kill: 10 – 14 days
- Residual activity prevents re-growth for up to one year
- Has leaching characteristics

#316 Weed Easy In Action

24 Hours

7 Days

10 Days

Non-Selective Herbicide

#318: Banish

- VOC-compliant alternative to #322 Turf King
- Liquid, cost-effective water-based soil sterilant
- 1:10 concentrate, dilutable with water
- 1.2% Lithium Salt of Bromacil
- Residual activity prevents re-growth up to one year
- Low odor, non-staining formula
- Absorbed by the root for a slower kill (up to 14 days)
- Lower dosage rate for bare areas, higher rate heavy weed population

Non-Selective Herbicides

#322: Turf King

- Liquid, oil-based soil sterilant
- 1:10 concentrate, dilutable with water or oil. Liquid required to move into the root zone
- 3.73% Prometon
- Primarily basil absorbed
- Residual activity prevents re-growth up to one year
- Increased effectiveness with #395 Surfactant
- Non-VOC compliant. Recommend #318 Banish

Hints for Applying Herbicides

- Always follow label directions, more is never better
- When applying soil sterilants, ensure enough is applied to allow ground penetration
- When applying soil sterilants, ensure ground is clear enough to allow ground penetration
- Use a dedicated sprayer for each herbicide type
- Optimal application time is when weeds are young and / or actively growing; active weeds will draw the herbicide into the root. Weeds can go into a dormant “hibernation” state when stressed

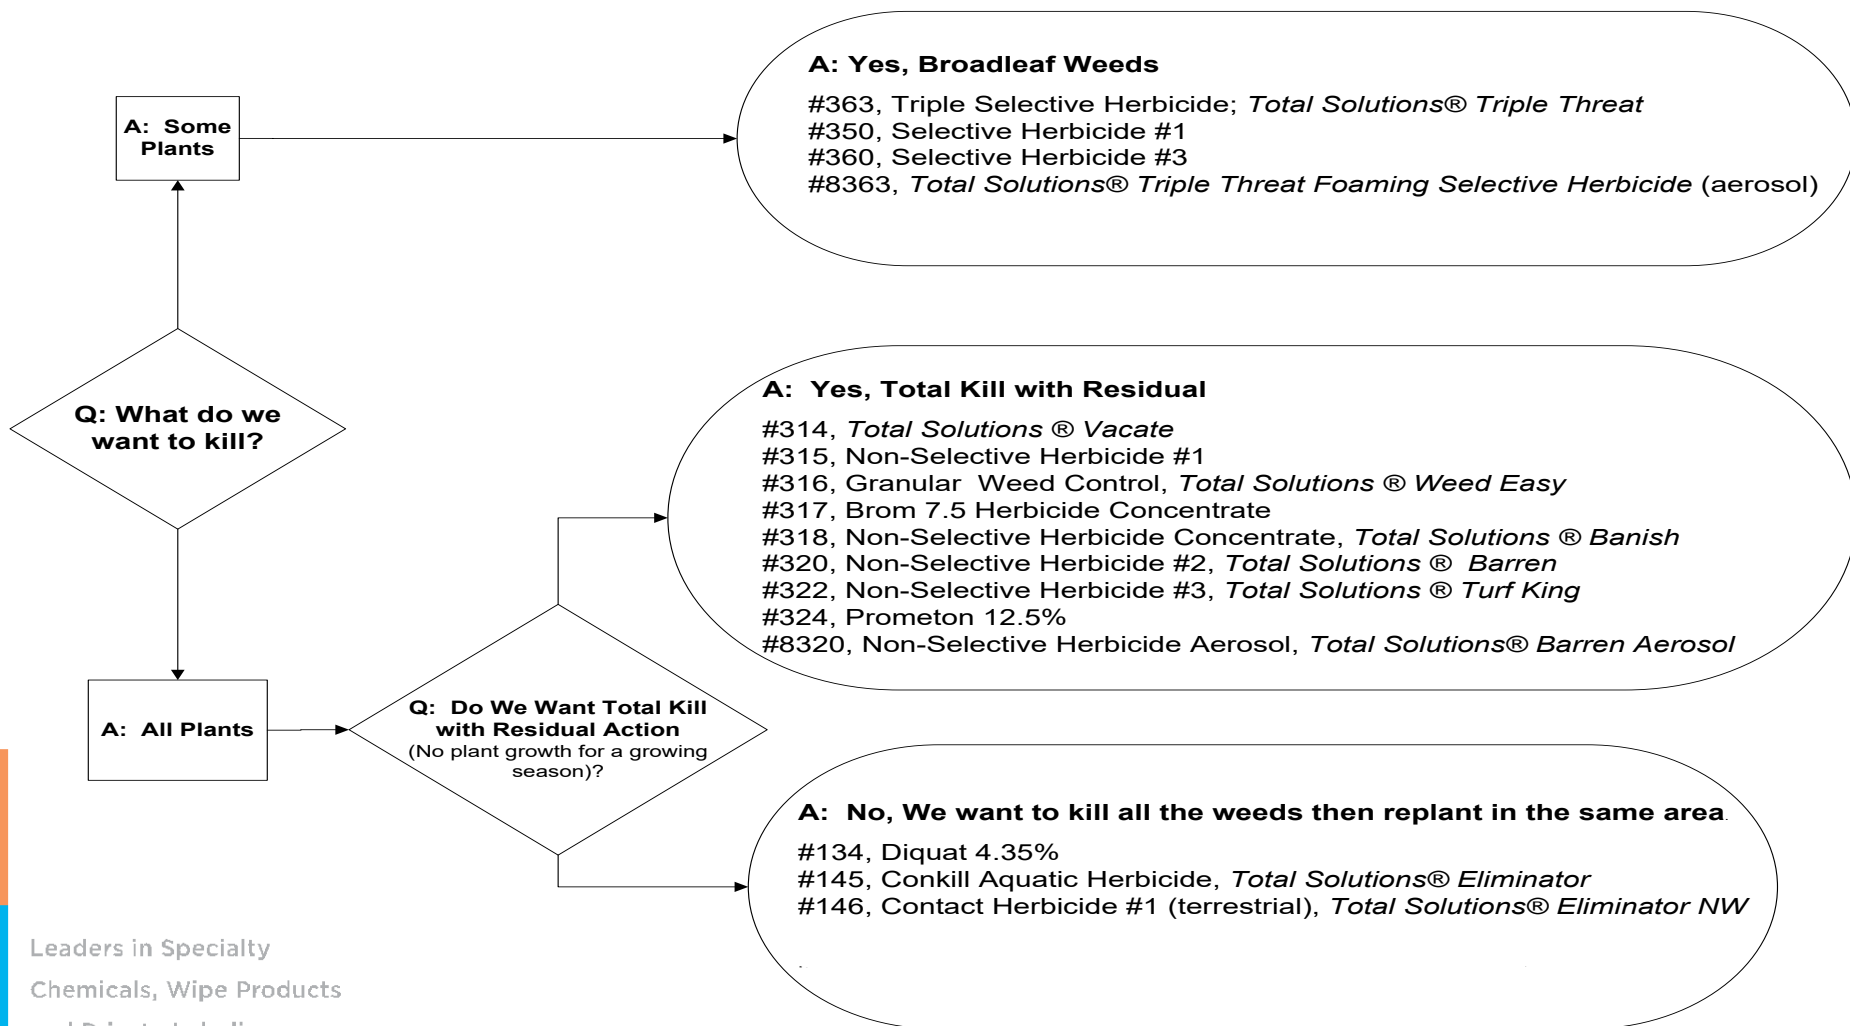

Examples of not following label instructions

Factors in Successful Application

- Results Desired
- Time of Year
- Climatic Conditions
- Soil Types
- Type of Herbicide Used
- Use of Surfactants

Herbicide Selection Guide
